ABSTRACT

Data on the sex, ethnicity, age, and geographic origin of undergraduate and post-baccalaureate students enrolled in New Jersey colleges and universities in fall 1980 are given, along with comparisons and trends over the past five years. Increases in the enrollment of women in New Jersey higher education between 1976 and 1980 occurred among part-time undergraduate and full-time post-baccalaureate students (38 percent and 36.5 percent, respectively). Women were the majority of part-time undergraduate students (60.1 percent), while men were the majority of full-time post-baccalaureate students. Women represented 51.1 percent of full-time undergraduate students in fall 1980 and 52.1 percent of part-time post-baccalaureate students. Blacks and Hispanics (combined) increased 19 percent between 1976 and 1980, while whites/others (Asian/Pacific Islander, American Indian/Alaskan Native, and nonresident alien) were responsible for three-quarters of the systemwide growth. Hispanics increased more than did blacks (42.1 percent compared with 11.3 percent). Changes in proportions of minority full-time undergraduate students reflect absolute increases in the public sector and relative stability in the independent sector. Whites/others continue to constitute the vast majority of New Jersey higher education enrollments (85.7 percent overall), ranging from 82.2 percent among full-time undergraduates to 91.8 percent among part-time post-baccalaureates. Conversely, the highest percentage of minorities is among full-time undergraduates (17.2 percent for blacks/Hispanics combined), followed by part-time undergraduates, full-time post-baccalaureates, and part-time post-baccalaureates (8.2 percent). Fall 1980 data for individual colleges are included. (SW)

I. INTRODUCTION AND SUMMARY

This Data Brief reports on the sex, ethnicity, age, and geographic origin of both undergraduate and post-baccalaureate[1] students enrolled in New Jersey colleges and universities in fall 1980, and presents comparisons and trends over the past five years.

A substantial increase in the enrollment of women in New Jersey higher education is probably the single most striking finding in this report. The data on enrollment by sex reveal that, overall, the number of women enrolled has risen significantly during the past five years (20.9%), accounting for all of the total systemwide growth (10.1%) since the number of men was virtually unchanged (down 0.3% between fall 1976 and fall 1980).

The most dramatic increases for women between 1976 and 1980 occurred among part-time undergraduate and full-time post-baccalaureate students (38.0% and 36.5%, respectively). Their growth among the former, the only student category of which they represented the majority in 1976, increased their share from 52.7% to 60.1% of the total. In the case of full-time post-baccalaureate enrollment, although men remained the majority in 1980, women had increased their share from 31.2% to 36.4%.

Among full-time undergraduate and part-time post-baccalaureate students, the relatively modest increases for women (9.3% and 16.0%, respectively), offset declines for men, to produce overall increases for those types of students. Moreover, in both instances, the growth in the number of women resulted in their accounting for the majority by fall 1980 (51.1% of full-time undergraduate and 52.1% of part-time post-baccalaureate enrollment).

Increases during the past five years in the enrollment of minorities (specifically, blacks and Hispanics, in this report) also have been significant. Blacks and Hispanics (combined) increased 19.0% between 1976 and 1980, a rate just slightly less than that for women (20.9%, noted above) and double the overall rate (10.1%).

---

[1]Post-baccalaureate enrollment includes both graduate (i.e., master's and doctoral) and first-professional enrollment. The latter includes enrollment in medicine, dentistry, law, and the theological professions.

Whites/others[2] also increased, but at a slower rate (8.8%). Nevertheless, this group was responsible for three-quarters of the systemwide growth, while blacks and Hispanics accounted for the other one-quarter.

Within the minority category, Hispanics increased much more dramatically than did blacks (42.1% compared with 11.3%), primarily as a function of their very small enrollment in the base year of fall 1976. Similarly, the most marked percentage increase for minorities occurred among full-time post-baccalaureate students, the category with the smallest enrollment of blacks and Hispanics in 1976. The most substantial increase for Hispanics, in both absolute and percentage terms, occurred among full-time undergraduates, where they grew by 2,744 students (or 48.6%) between 1976 and 1980. For blacks, their greatest absolute increase (1,431 students) also occurred among full-time undergraduates; however, their greatest percentage increase was among full-time post-baccalaureate students (20.8%, compared with 8.5% among full-time undergraduates).

Varying rates of change in minority full-time undergraduate enrollments resulted in a slight shift between 1976 and 1980 in their distribution among the collegiate sectors. The public senior institutional sectors, which enrolled 42.3% of all minority full-time undergraduates in 1976, increased this percentage to 44.0% of the total in 1980. At the same time, the independent colleges enrolled a smaller proportion in 1980 compared with 1976 (17.5% and 19.2%, respectively). The community college sector accounted for the same proportion in both years (38.5%). It should be noted that the change in proportions reflect absolute increases in the public sector and relative stability in the independent sector.

Despite significant growth for blacks and Hispanics during the past five years, in both absolute and relative terms, whites/others continue to constitute the vast majority of New Jersey higher education enrollments (85.7% overall), ranging from a low of 82.8% among full-time undergraduates to a high of 91.8% among part-time post-baccalaureate students. Conversely, the highest percentage of minorities is among full-time undergraduates (17.2% for blacks/Hispanics combined), followed by part-time undergraduates, full-time post-baccalaureates, and part-time post-baccalaureates (8.2%).

---

[2]"White and Other" includes white non-Hispanic, Asian/Pacific Islander, American Indian/Alaskan Native, and non-resident alien. However, approximately 98% of these are white non-Hispanic.

Data on the age of New Jersey college students show that the anticipated "graying" of the college population (i.e., the enrollment of increasingly large numbers of older students) is occurring only to a limited extent, and primarily among part-time students. Since fall 1977, the age distribution of full-time undergraduates has shifted only slightly (from 87.6% to 87.4% in the under-25 group). Part-time undergraduates, on the other hand, historically much less heavily concentrated in the younger groups (under 25), have exhibited a trend towards even smaller proportions of under-25's and larger proportions of 35-and-over's. The former proportion declined from 38.9% in 1977 to 34.8% in 1980; the latter grew from 25.4% to 29.6% during the same time period.

Geographic origin data (New Jersey/other states/foreign countries) reveal that more than 9 out of 10 undergraduates (both full- and part-time) in New Jersey colleges and universities are New Jersey residents, the proportion having changed only slightly between 1977 and 1980 (for full-time undergraduates, from 92.2% to 91.2%; for part-time undergraduates, from 97.4% to 97.0%).

Overall, the geographic origin profile of full-time undergraduates in New Jersey's colleges and universities displayed little change between 1977 and 1980. However, the distribution among the collegiate sectors of students from outside the state (other states and foreign countries) exhibited a definite shift, with an increased proportion of the total enrolling in the public senior sector in 1980 compared with 1977 (30.8%, up from 25.7%), and a parallel decreased proportion enrolling in the independent colleges. In 1980, the latter accounted for 66.7% of all non-New Jersey full-time undergraduates, down from 73.1% in 1977. (The community college sector increased its proportion of non-state resident enrollments, from 1.2% to 2.5% of the total.)

The data on sex and ethnicity are reported for four categories of students: full-time undergraduate, part-time undergraduate, full-time post-baccalaureate, and part-time post-baccalaureate. Data on age and geographic origin are reported only for undergraduate students, both full- and part-time. For each of these four categories of students, and within the different New Jersey collegiate sectors, somewhat different patterns of change emerge when such factors as sex, ethnicity, age, and geographic origin are considered. The remainder of this Data Brief presents an analysis of the recent trends in these student characteristics. Complete fall 1980 data for individual colleges are presented in Appendix Tables 25 through 50.

II. ENROLLMENT BY STUDENT CATEGORY[3]

Total headcount enrollment in New Jersey institutions of higher education reached 319,342 in fall of 1980. This total represents an increase of 2.5% over the fall 1979 figure and 10.1% since fall 1976 (see Table 1). The New Jersey trend compares, at the national level, with a greater rate of growth (3.2%) between 1979 and 1980, and a slower rate (8.7%) between 1976 and 1980.

As Table 1 illustrates, however, the rates of growth over the past five years among full- and part-time students in New Jersey institutions, at both the undergraduate and post-baccalaureate levels, vary significantly.

Table 1

ENROLLMENT IN NEW JERSEY COLLEGES AND UNIVERSITIES
BY ATTENDANCE STATUS AND LEVEL: FALL 1976 THROUGH FALL 1980

	1976	1977	1978	1979	1980	% Change 1980/1976
Full-time Undergraduate	148,942	151,078	149,743	153,270	154,749	3.9%
Part-time Undergraduate	96,536	101,268	109,638	111,878	116,694	20.9%
Full-time Post-Baccalaureate	11,130*	11,896	11,998	12,388	13,027	17.0%
Part-time Post-Baccalaureate	33,373*	36,063	35,832	34,117	34,872*	4.5%
Total	289,981	300,305	307,211	311,653	319,342	10.1%

*Fall 1976 and fall 1980 enrollment data shown here are revisions of those contained in the "Opening Fall Enrollment..." Data Brief.

Enrollment of part-time undergraduates has increased at a rate more than five times that of full-time undergraduates (20.9% compared with 3.9%), such that by 1980 part-time undergraduates constituted 43.0% of total undergraduate enrollment, compared with 39.3% in 1976. On the other hand, among post-baccalaureate students, the full-time enrollment growth rate has been significantly higher than that for part-time, 17.0% and 4.5%, respectively. Nonetheless, the vast majority of post-baccalaureate students still enroll on a part-time basis, 72.8% in 1980 compared with 75.0% in 1976.

[3]This section, included for purposes of context, summarizes the enrollment trends presented in an earlier publication (Data Brief Series, "Opening Fall Enrollment in New Jersey Colleges and Universities, Fall 1980 and Recent Trends"). All data in both the present and the earlier publication are fall headcount enrollments.

III. ENROLLMENT BY SEX

Summary

In fall 1980 women comprised 53.9% of total enrollment in New Jersey colleges and universities (Table 2). This represents an increase in women as a proportion of the total and reflects the continuation of a trend begun in 1977 when women first became a majority (50.5%) of the state's higher education students. The number of women enrolled has grown by 20.9% since 1976 (twice as fast as overall enrollment growth), while the enrollment of men has declined very slightly (-0.3%) over the five-year period.

Table 2

TOTAL ENROLLMENT IN NEW JERSEY COLLEGES AND UNIVERSITIES BY SEX: FALL 1976 THROUGH FALL 1980

	1976	1977	1978	1979	1980	% Change 1976-1980
Men	147,568	148,538	148,837	146,514	147,113	-0.3%
Women	142,413	151,767	158,374	165,139	172,229	20.9%
Total	289,981	300,305	307,211	311,653	319,342	10.1%

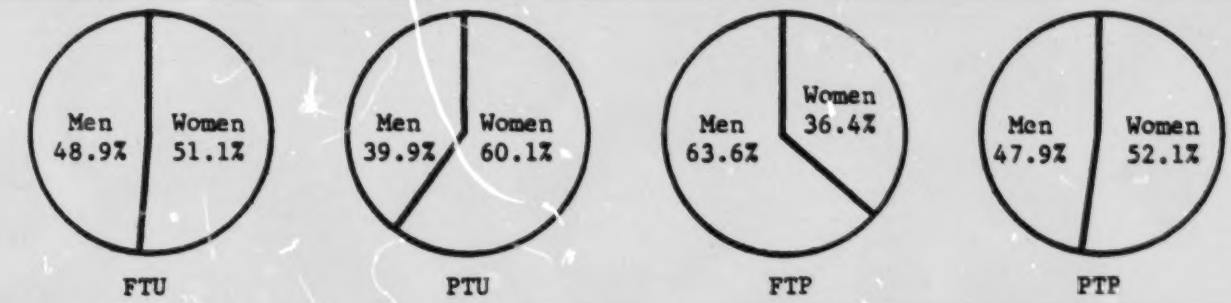
PERCENTAGE DISTRIBUTION

	1976	1977	1978	1979	1980
Men	50.9%	49.5%	58.4%	47.0%	46.1%
Women	49.1%	50.5%	51.6%	53.0%	53.9%
Total	100.0%	100.0%	100.0%	100.0%	100.0%

Reflecting the overall pattern, women constituted the majority of the fall 1980 enrollment in three of the four student categories: full-time undergraduate, part-time undergraduate, and part-time post-baccalaureate (Figure 1). Only among full-time post-baccalaureate students were men the majority.

Figure 1

FALL 1980 ENROLLMENT BY SEX AND STUDENT CATEGORY



FTU - Full-time Undergraduate
PTU - Part-time Undergraduate
FTP - Full-time Post-Baccalaureate
PTP - Part-time Post-Baccalaureate

Full-Time Undergraduate Enrollment by Sex

The total number of full-time undergraduate students has increased by 3.9% since 1976 (Table 3). Enrollment declines for this category of students occurred only at the state colleges (-1.5%) and at the C.M.D.N.J.-School of Allied Health Professions (SAHP)[b] (-26.6%).

The number of full-time undergraduate women has increased by 6,719 (9.3%) between 1976 and 1980. This percent increase is more than twice as much as the overall increase for these students (3.9%), and contrasts with a 1.2% decline during the same period in the number of male full-time undergraduates. (Fall 1979 was the first year there were more female full-time undergraduates than male.) The number of men decreased in the state colleges (-1.9%), C.M.D.N.J. (SAHP) (-56.1%), and the independent colleges (-5.6%), which is consistent with the statewide decline for men. Even in the other sectors, where the number of men increased, the pattern was consistent with the overall trend in that the percent increases for men were relatively small and were greatly exceeded by the increases for women.

[b]The enrollment at the School of Allied Health Professions (SAHP) of C.M.D.N.J. that is included in this report is restricted to students in the School's freestanding certificate programs. Students enrolled in programs conducted jointly with other colleges, which grant degrees in the programs, are included in those colleges' enrollments.

Among full-time undergraduates in fall 1980, although women comprised a majority of the total (51.1%), men outnumbered women at N.J.I.T. and in the independent college sector. (They were 89.6% and 51.3%, respectively, of those sector totals.) However, in both instances, the proportion which men represent of the total has declined steadily since 1976 (Table 4). Their overall proportion decreased from 51.4% in 1976 to 48.9% in 1980 (about 0.7 percentage points annually), while the converse was true for women. This pattern of decrease for men and increase for women occurred within all collegiate sectors. Women's share of sector total enrollments in fall 1980 ranged from a high of 77.9% at C.M.D.N.J. (SAHP), where a high percentage is not surprising since students in the allied health professions are usually predominantly female, to a low of 10.4% at N.J.I.T. The latter finding, likewise, can be traced to the traditional male predominance in the field of engineering.

Part-Time Undergraduate Enrollment by Sex

The number of part-time undergraduate students increased by 20.9% between 1976 and 1980 (Table 5). All collegiate sectors except Rutgers (which had a 3.3% decline) experienced growth among part-time undergraduates, with the most significant growth (nearly 16,000 students) occurring at the community colleges.

Women enrolled as part-time undergraduates increased by 38.0% during the five-year period from 1976 to 1980, which is nearly twice the rate of increase for all part-time undergraduates (20.9%). The increase in the number of women (19,313) far exceeded that of men (845 or 1.8%).

In every collegiate sector, substantial increases for women either augmented small increases or offset declines for men to produce an increase in part-time undergraduate enrollment, except at Rutgers University (as noted above). The number of women at Thomas A. Edison State College more than doubled. The very small number at N.J.I.T. in fall 1976 (48) had more than tripled by fall 1980 (159). Both of these instances of dramatic growth in the number of women occurred in the only sectors where, contrary to the statewide distribution for part-time undergraduates (60.1% women/39.9% men), men continue to outnumber women. (Men were 51.8% at Edison and 92.0% at N.J.I.T. in fall 1980.)

Men as a proportion of part-time undergraduates have decreased steadily, from 47.3% in 1976 to 39.9% in 1980, while the converse has been true for women (Table 6). This steady decline for men among part-time undergraduates (down 7.4 percentage points since fall 1976) is more marked than among full-time undergraduates (down 2.5 percentage points during this same period). The pattern of decreasing proportions of men and increasing proportions of women occurred in all collegiate sectors.

Full-Time Post-Baccalaureate Enrollment by Sex

Full-time post-baccalaureate students increased by 17.0% since fall 1976 to a total of 13,027 in fall 1980 (Table 7). It is only among this type of student that men still outnumber women. However, statewide, the rate of increase since 1976 for women (36.5%) was twice the overall rate (17.0%) and more than four times the increase among men (8.2%) in the full-time post-baccalaureate category.

This pattern of major growth for women, coupled with much smaller increases for men (or a very slight decrease, such as the -1.1% in the state college sector), is repeated in all sectors except C.M.D.N.J. (medical, dental, and biomedical science schools), where the numbers of both men and women increased markedly (40.3% and 62.7%, respectively), and N.J.I.T., where both declined (-12.8% and -27.3%, respectively).

Although still representing the majority of all full-time post-baccalaureate enrollment, as noted above, men's share of the total has declined from 68.8% in fall 1976 to 63.6% in fall 1980 (Table 8). In 1980, only in the state college sector did women outnumber men, accounting for 68.2% of the sector total (845). This finding is consistent with the extent to which graduate education at the state colleges is dominated by a traditionally female field of study, namely, education.

Part-Time Post-Baccalaureate Enrollment by Sex

Part-time post-baccalaureate enrollment totalled 34,872 in the fall of 1980, increasing by 4.5% over the 1976 level. The overall increase resulted from an increase in the number of women (16.0%) which offset a decline (-5.7%) in the number of men over the past five years (Table 9).

The statewide pattern is not reflected uniformily across all collegiate sectors. The increases for women were not sufficient to offset the declines for men either at N.J.I.T. or in the state college sector. At C.M.D.N.J., the very small part-time post-baccalaureate enrollment decreased markedly for both men and women, resulting in an overall decline of 36.1% (from 36 to 23 students) between 1976 and 1980. The independent college sector deviated from the statewide pattern and from that of the other sectors in that it was the only one in which the number of men did not decline. The pattern at Rutgers corresponds most closely to that which obtained for the total.

As a proportion of total part-time post-baccalaureate enrollment, men declined from 53.0% to 47.9% between 1976 and 1980 (Table 10). A pattern of steadily decreasing male proportions and steadily increasing female proportions of total enrollment is evident in all collegiate sectors except C.M.D.N.J. where the sex distribution of the very small part-time post-baccalaureate enrollment has exhibited an uneven trend. Although women began to outnumber men among all part-time post-baccalaureate students in fall 1979, with respect to individual sectors they were the majority only in the state college sector. However, their proportion in this sector (69.1% in 1980) influences heavily the statewide pattern since the state colleges enroll more than one-third of the total part-time post-baccalaureate students.

IV. ENROLLMENT BY ETHNICITY

Summary

Since fall 1976 minorities (i.e., blacks and Hispanics) have grown both in numbers and as a proportion of the total enrollment in New Jersey colleges and universities (Table 11). In fall 1980, the 31,915 blacks and 13,638 Hispanics comprised 14.3% of total enrollments, up from 13.2% in fall 1976.

The rates of growth for these two groups have differed significantly from each other (11.3% for blacks and 42.1% for Hispanics) but both have exceeded the rate for whites/others (8.8%) and the rate for the total (10.1%) over the five-year period.

Table 11

TOTAL ENROLLMENT IN NEW JERSEY COLLEGES AND UNIVERSITIES BY ETHNICITY: FALL 1976 THROUGH FALL 1980

	1976	1977	1978	1979	1980	% Change 1976-1980

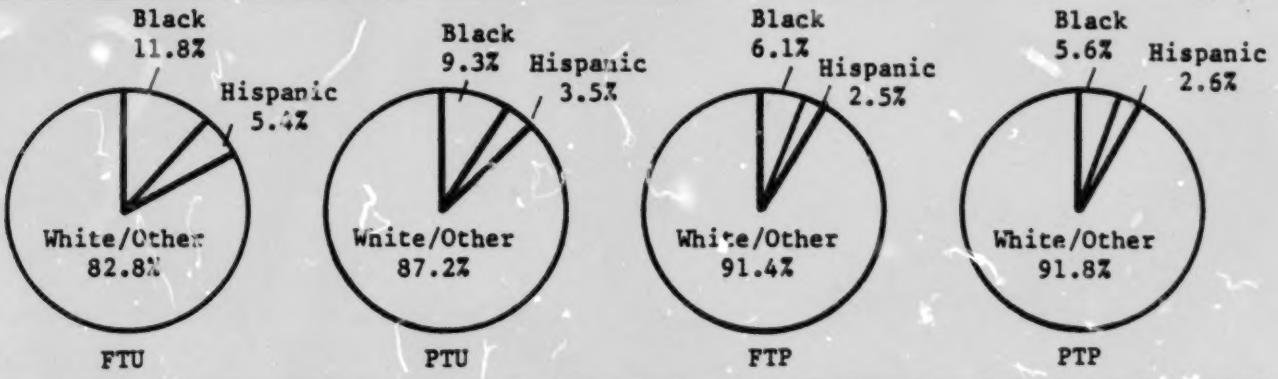
*"White/Other" includes white non-Hispanic, Asian/Pacific Islander, American Indian/Alaskan Native, and non-resident alien. Overall, approximately 98% of these are white non-Hispanic.

While the majority of students at all levels in 1980 were white/other, minority students (blacks and Hispanics) comprised larger percentages of the undergraduate (17.2% of full-time and 12.8% of part-time) than they did of the post-baccalaureate enrollment (8.6% of full-time and 8.2% of part-time) (Figure 2).

Figure 2

FALL 1980 ENROLLMENT BY ETHNICITY AND STUDENT CATEGORY



FTU - Full-time Undergraduate
PTU - Part-time Undergraduate
FTP - Full-time Post-Baccalaureate
PTP - Part-time Post-Baccalaureate

Full-Time Undergraduate Enrollment by Ethnicity

The total number of full-time undergraduates grew by 3.9% between 1976 and 1980 (Table 12). In comparison, the number of black full-time undergraduates increased at more than twice that rate (8.5%) and the number of Hispanics grew a dramatic 46.6% during the five-year period. (The large percentage increase among the latter is explained chiefly by the relatively small enrollment of Hispanics (5,647) in the base year of fall 1976.) In contrast, the number of whites/others increased at approximately one-third the rate of growth for all full-time undergraduates (1.3% compared with 3.9%).

The pattern of greater rates of increase for Hispanics than for either blacks or whites/others was consistent across collegiate sectors with the exception of N.J.I.T. where the rate for blacks was higher than for Hispanics. Also contrary to the statewide pattern, the growth rate for black full-time undergraduates in the community and independent college sectors did not exceed that for all full-time undergraduates in these sectors.

With respect to the overall growth rate for full-time undergraduates, the state colleges and C.M.D.N.J. exhibit trends contrary to the statewide pattern of increase (as noted above

in the discussion of enrollment by sex). From 1976 to 1980, the number of full-time undergraduates enrolled in the state colleges declined 1.5%, and at C.M.D.N.J. (SAHP), 26.6%. It is interesting to note that in the state colleges, while the number of both blacks and Hispanics increased (by 13.2% and 29.2%, respectively), this growth was not sufficient to offset a 4.3% decline among white/other students, resulting in the overall decline in the sector. A similar pattern occurred at C.M.D.N.J. in that the increase in minorities did not offset the decrease among whites/others.

As a proportion of total full-time undergraduate enrollment, whites/others declined from 84.9% in fall 1976 to 82.8% in fall 1980 (Table 13). During the same interval, the proportion of Hispanics increased from 3.8% to 5.4%, while blacks increased from 11.3% to 11.8% of the total. A similar pattern of declining proportions of whites/others and increasing proportions of blacks and Hispanics occurred in all collegiate sectors except the community colleges and independent colleges, where blacks decreased very slightly as a proportion of the total. This latter finding is consistent with the above-noted atypical growth rate for blacks in these two sectors.

The ethnic distribution of full-time undergraduate enrollment in 1980 varies among the collegiate sectors, with only Rutgers University mirroring the statewide pattern (17.2% minority and 82.8% white/other). The largest minority proportions were in the community college sector and at C.M.D.N.J. (SAHP), where blacks and Hispanics (combined) accounted for 23.0% and 66.4% of their respective totals. Both of these findings might be expected. Community colleges traditionally have enrolled the largest proportions of minority students compared with other sectors. The significant black/Hispanic majority at C.M.D.N.J. (where the total full-time undergraduate enrollment in fall 1980 was only 113) is comparable to that of Essex County College, which, like C.M.D.N.J., is located in a city having a large minority population.

Varying rates of change in minority full-time undergraduate enrollments resulted in a slight shift between 1976 and 1980 in their distribution among the collegiate sectors. The public senior institutional sectors, which enrolled 42.3% of all minority full-time undergraduates in 1976, increased this percentage to 44.0% of the total in 1980. At the same time, the independent colleges enrolled a smaller proportion in 1980 compared with 1976 (17.5% and 19.2%, respectively). The community college sector accounted for the same proportion in both years (38.5%).

Part-Time Undergraduate Enrollment by Ethnicity

As noted earlier in the section concerning the sex distribution of part-time undergraduates, the enrollment increased 20.9% statewide, from 96,536 in 1976 to 116,694 in 1980 (Table 14). The growth rates for white/other (21.1%) and Hispanic (32.8%) students during this same interval were equal to or greater than the statewide rate of growth. Even though the absolute number of blacks did increase, the rate of growth for blacks (15.0%) was below the rates for both whites/others and Hispanics, as well as for all part-time undergraduates.

The data for all collegiate sectors also show that, with the exception of Rutgers, all sectors experienced increases in their total number of part-time undergraduates. (There was a decline of 3.3% in the number of part-time undergraduates at Rutgers.) However, with respect to differential rates of change for ethnic groups, sector data are not uniformly consistent with statewide data. For example, while the state colleges experienced an overall increase in the number of part-time undergraduates, the number of both black and Hispanic students in this category declined between 1976 and 1980, in contrast to the statewide trend. Rutgers, on the other hand, while showing an overall decrease (as noted above), posted substantial increases for both blacks and Hispanics (24.4% and 34.4%, respectively) which, nevertheless, were insufficient to offset a decrease among whites/others.

As a proportion of part-time undergraduate enrollment, a decrease for blacks (9.8% in 1976 to 9.3% in 1980) was counterbalanced by an increase for Hispanics (3.1% in 1976 to 3.5% in 1980), such that the total minority proportion (black/Hispanic combined) changed only slightly (from 12.9% to 12.8% between 1976 and 1980) (Table 15). Blacks and Hispanics comprised a high of 21.8% of the total part-time undergraduate enrollment at Rutgers University, and a low of 9.9% at the independent colleges. The high proportion of blacks and Hispanics at Rutgers is attributable primarily to the Newark Campus, where blacks/Hispanics accounted for 46.8% of the campus total part-time undergraduate enrollment in 1980, and which enrolled 29.7% of all Rutgers' part-time undergraduates that year.

Full-Time Post-Baccalaureate Enrollment by Ethnicity

The statewide rate of increase between fall 1976 and fall 1980 in the number of full-time post-baccalaureate students (17.0%, from 11,130 to 13,027) (Table 16) was exceeded by both blacks and Hispanics in this student category. Black full-time post-baccalaureate enrollment rose slightly faster than the total (20.8%), and Hispanic enrollment increased at more than double the overall rate (37.2%).

Of the collegiate sectors, only N.J.I.T. experienced an overall decline (-13.9%) during the five-year period. C.M.D.N.J. (medical, dental, and biomedical science schools) exhibited the most dramatic increase (45.8%), growing at more than two-and-one-half times the overall rate between 1976 and 1980. C.M.D.N.J. also posted the largest percentage increases for blacks and Hispanics (28.2% and 104.0%, respectively), with the exception of the state college sector and N.J.I.T. (The state college sector had a larger increase for blacks (133.3%), and N.J.I.T., a larger increase for Hispanics (250.0%); however, minority as well as total full-time post-baccalaureate enrollment in both of these sectors is relatively small. As a result, small numerical increases yield large percentage changes.) At Rutgers, blacks showed only a slight increase and Hispanics actually declined (+2.7% and -9.8%, respectively), contrary to the statewide trend.

The proportion of minority full-time post-baccalaureate students increased slightly, from 8.1% in fall 1976 to 8.6% in fall 1980 (Table 17). A pattern of increased proportions of minorities and decreased proportions of whites/others over the five-year period is not repeated consistently across all sectors. At Rutgers Univeristy the converse was true, and at C.M.D.N.J. and the independent college sectors, the minority/white distribution remained relatively constant.

Part-Time Post-Baccalaureate Enrollment by Ethnicity

As was true among full-time post-baccalaureate students, the growth in the number of minorities, both black (14.4%) and Hispanic (31.3%), was significantly larger than the growth for whites/others (3.4%) and for this group of students as a whole (4.5%) between fall 1976 and fall 1980 (Table 18). The statewide pattern was repeated throughout the public sector (except at C.M.D.N.J.), in that the numbers of both blacks and Hispanics increased at rates exceeding that of the total enrollment in the sector. This was not the case for independent colleges. However, the latter did post increases for minorities and reflected the overall trend of a greater percentage increase for Hispanics than for blacks, as did the state colleges and Rutgers University in the public sector.

As noted earlier in the discussion of part-time post-baccalaureate enrollment by sex, the total number declined at the state colleges, C.M.D.N.J., and N.J.I.T., contrary to the statewide trend. (However, the state college sector decline was minimal (-0.8%). The enrollments at C.M.D.N.J. and N.J.I.T. are very small proportions of the total for this student category, and consequently, declines in these sectors did not affect the statewide total pattern.) It is interesting to note that while the number of both blacks and Hispanics increased in all sectors except C.M.D.N.J., in the case of the state colleges and N.J.I.T. this growth was not sufficient to offset the decline among white/other students, resulting in the overall decline in these sectors.

As a proportion of the total part-time post-baccalaureate enrollment, whites/others declined very slightly, from 92.8% in 1976 to 91.8% in 1980 (Table 19). In the same interval the proportion of Hispanics increased from 2.0% to 2.6%, and blacks increased from 5.2% to 5.6% of the total. The distributions by ethnicity of part-time post-baccalaureate enrollment have not changed uniformly across collegiate sectors, although the trend is toward declines for whites/others and increases for minorities. This trend is more pronounced in the state college sector and at N.J.I.T., with virtually no change in the independent college sector, and irregular patterns of change at Rutgers University and C.M.D.N.J.

V. ENROLLMENT BY AGE[5]

Summary

A commonly held expectation regarding the age distribution of college students is that, as the number of annual high school graduates declines, younger people (i.e., those under 25 years old, the "traditional" college-age cohort of students) will comprise a smaller proportion of undergraduate enrollments. Conversely, older people would comprise a larger proportion. This expectation is partially borne out in data on undergraduate enrollment by age in New Jersey colleges and universities from fall 1977 to fall 1980 (Table 20).

Table 20

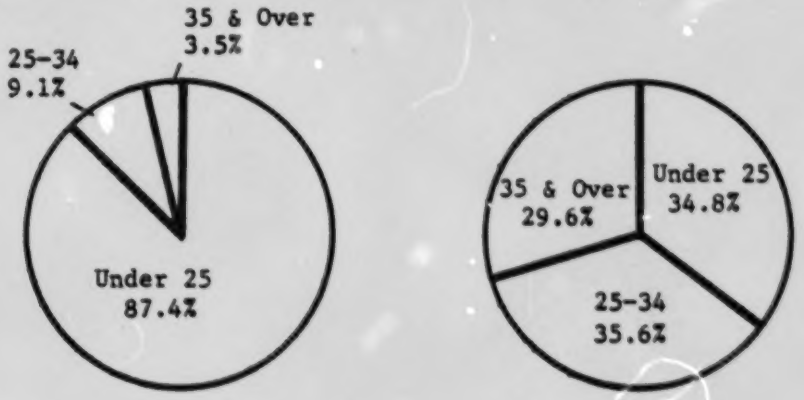
Total PTU's	101,268	109,638	111,878	116,694	100.0%	100.0%

[5]Age data (unlike the data on sex and ethnicity) are not presented for post-baccalaureate students, but for undergraduates only. Furthermore, this section differs from the previous two in that the base year for comparisons is fall 1977, not fall 1976, because 1976 data sufficient for comparison with later years were not available. Another difference in this section is in the display and treatment of the data. Percentage distributions only (not numerical) are shown, and these distributions are based on the number of students for whom age data were reported by the colleges ("Total-Age Known"). Since this base number has been growing, comparisons over time using the numerical data would yield spurious increases.

The overwhelming majority of full-time undergraduates in fall 1980 (nearly 9 in 10) were in the under-25-year-old age category (87.4%), their proportion of the total having shifted only slightly since fall 1977 (87.6%). By contrast, fewer than 4 in 10 part-time undergraduates were from the "traditional" age cohort in 1977 (38.9%), and this proportion declined 4.1 percentage points over the four-year period, to 34.8% in 1980 (Figure 3).

Figure 3

FALL 1980 UNDERGRADUATE ENROLLMENT BY AGE GROUP AND ATTENDANCE STATUS



Full-time Undergraduate Part-time Undergraduate

Full-time Undergraduate Enrollment by Age

The statewide age distribution of full-time undergraduates is most closely mirrored in the data for the state college sector (Table 21). Rutgers University and the independent college sector both enroll higher proportions of younger students than is true statewide (92.4% and 92.7%, respectively, compared with 87.4%, in fall 1980). Although, consistent with the statewide trend, the age distributions in the senior collegiate sectors have changed only slightly, the changes that have occurred are, contrary to the statewide trend, in the direction of enrollment of larger proportions of younger students. Only in the community college sector has there been a distinct trend towards decreased enrollment

of younger/increased enrollment of older students. There, the under-25's comprised 79.3% of full-time undergraduates in 1980, down somewhat from 81.2% in 1977. Both the 25-34's and the 35-and-over's increased their proportions during the same interval. (The C.M.D.N.J.-School of Allied Health Professions has a significantly "older" age profile than both the total full-time undergraduate student population and the community college sector as a whole; however, its age data are similar to those of nearby Essex County College, and viewed in that light seem less unusual.)

Part-time Undergraduate Enrollment by Age

The fall 1980 age profiles of part-time undergraduates, particularly in the community college sector but also in the state and independent college sectors, were remarkably similar to one another and to the overall age distribution (Table 22). N.J.I.T. and Edison both deviated from the statewide patterns, but in different directions. N.J.I.T.'s part-time undergraduates were significantly younger in comparison with the total. (Only 12.9% were in the 35-and-over age group, compared with 29.6% statewide in 1980.) Edison, which has only part-time enrollment and which was designed to serve a non-traditional student population, had a markedly older age distribution. (Their proportion in the 35-and-over category, 66.0%, was more than double the overall proportion in fall 1980.)

In terms of the trend between 1977 and 1980 in the age distribution of part-time undergraduates, the statewide pattern of declining proportions of younger and growing proportions of older students was reflected most consistently in the community and independent college sectors. The state college sector and N.J.I.T. exhibited virtually no change in their distributions. The most dramatic shift was evident in the data for Edison, which increased its already substantial percentage of 35-and-over's, from 47.3% to 66.0%, while decreasing the proportion of under-25's, from 17.7% to 2.8%, during the four-year period.

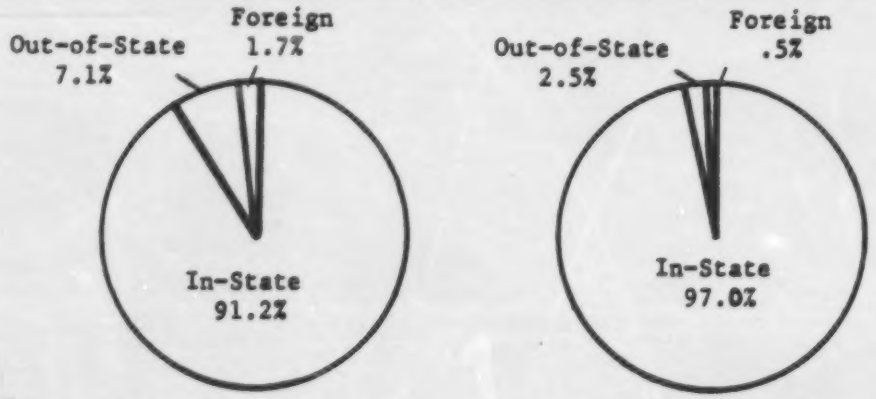
VI. ENROLLMENT BY GEOGRAPHIC ORIGIN[6]

Summary

Historically, the vast majority of undergraduate students enrolled in New Jersey colleges and universities have been state residents. Data for the fall of 1980 indicate that this pattern continued, with only slight changes for both full-time and part-time undergraduates. In 1980, 91.2% of full-time undergraduate students and 97.0% of part-time undergraduates were New Jersey residents (Figure 4).

Figure 4

FALL 1980 UNDERGRADUATE ENROLLMENT BY GEOGRAPHIC ORIGIN AND ATTENDANCE STATUS



Full-Time Undergraduate Enrollment by Geographic Origin

Since 1977, full-time undergraduate enrollment increases in the state's institutions of higher education have occurred among students from New Jersey, as well as from other states and foreign countries, such that the distribution by geographic origin has remained essentially stable (Table 23). Between fall 1977 and fall 1980, the relative proportion of in-state students declined slightly, from 92.2% to 91.2%, while out-of-state students grew

[6] As noted earlier with respect to the age data, geographic origin data are presented for undergraduates only. Likewise, the base year for comparisons is fall 1977, in this instance because fall 1976 data were not available. Finally, the data are in the form of percentage distributions only, based on the number of students for whom geographic origin was reported.

from 6.5% to 7.1% of the total, and foreign students increased their proportion from 1.3% to 1.7%. These percentages are based on a virtually constant proportion of total full-time undergraduates whose origin is known (99.3%).

The pattern of very high in-state student proportions that have declined very slightly during the past four years is repeated in all public collegiate sectors except N.J.I.T., where both the in-state and out-of-state percentages have grown, while the foreign has declined. Proportions of New Jersey resident full-time undergraduates in the public institutions in 1980 ranged from a low of 92.8% for Rutgers University (down from 94.0% in 1977) to a high of 99.2% for the community college sector (down from 99.7% in 1977).

The independent colleges exhibited less change in their geographic origin distibution than did the public colleges, enrolling a virtually constant proportion of in-state students (74.3% in 1980). The proportion from other states has grown (from 22.3% to 23.0%), while that from foreign countries has declined slightly (from 3.0% to 2.7%), during the past four years.

Overall, the geographic origin profile of full-time undergraduates in New Jersey's colleges and universities displayed little change between 1977 and 1980. However, the distribution among the collegiate sectors of students from outside the state (other states and foreign countries) exhibited a definite shift, with an increased proportion of the total enrolling in the public senior sector in 1980 compared with 1977 (30.8%, up from 25.7%), and a parallel decreased proportion enrolling in the independent colleges. In 1980, the latter accounted for 66.7% of all non-New Jersey full-time undergraduates, down from 73.1% in 1977. (The community college sector increased its proportion of non-state resident enrollments, from 1.2% to 2.5% of the total.)

Part-Time Undergraduate Enrollment by Geographic Origin

Among part-time undergraduates, similar to their full-time counterparts (but to an even greater extent), New Jersey residents continued to predominate among fall 1980 enrolled students, comprising 97.0% of the part-time undergraduates for whom geographic origin data were known. (The latter accounted for 97.4% of total part-time undergraduates.) (See Table 24.)

The geographic distribution of part-time undergraduates has been remarkably stable in all sectors except N.J.I.T., where there seems to have been a 3.6 percentage point drop in the in-state proportion between 1977 and 1980. However, N.J.I.T. did not report geographic origin data for large proportions of its part-time undergraduate enrollment in both fall 1977 and fall 1980 (21.7% and 28.1%, respectively). Statistics calculated on such reduced base numbers (78.3% and 71.9% of the totals, respectively), might produce anomalous results.

Part-time undergraduates at the independent colleges reflect the overall pattern of predominance of in-state students more nearly than is true of their full-time counterparts. In the independent sector, 92.1% of the part-time undergraduates in 1980 were New Jersey residents, compared with the overall proportion of 97.0%. The same comparison among full-time undergraduates yielded percentages of 74.3% and 91.2%, respectively.
